EXPERIENCE

Kredible Technologies

Front-End Developer
Atlanta, Georgia
4/2016 - 7/2016

Four month contract as Lead UI/Front-End developer on a proprietary search tool application. The project was developed using AngularJS with "Controller As" syntax. Custom services and directives were developed to fulfill the needs of the project including developing an API service to interface with a NodeJS back end. Technologies used in this project were: AngularJS, Javascript, Bootstrap, HTML, SASS, CSS & Webpack.

BootcampXchange

Full-Stack Developer
Atlanta, Georgia
1/2016 - 3/2016

Partnered with another developer on a contract to build the world's first & only marketplace for employers & code schoolers. This project was built using PHP and SQL. Other technologies utilized included Bootstrap, Javascript, HTML & CSS. Worked on both the Front-End and Back-End.

DigitalCrafts

Web Developer
Atlanta, Georgia
10/2015–3/2016

Developer in 16 Week full-stack Immersive Bootcamp. Spent 70 hours per week learning MEAN and LAMP stacks with a focus on javascript including Node.js. Comfortable with front-end technologies and integration with back-end technologies such as Node.js and PHP. Front-end technology experience includes Sass, HTML, CS3, jQuery, AnglularJs, and bootstrap. Worked on multiple projects that were a combination of independent and paired programming exercises on a daily basis and documented progress through github. Familiar with responsive design, SEO, and site performance.

PREVIOUS EXPERIENCE

WTS Proprietary Trading Group

Proprietary Equities Trader
Atlanta, Georgia
11/2003–11/2014

Previously worked in the finance industry for the past twelve years as an equities trader. This was a self- directed position that was commission based. Worked independently from a home office and was responsible for the buying and selling of securities. Responsible for a portfolio that averaged $500,000.

Ricoh Electronics Incorporated

Electrical Engineer
Lawrenceville, Georgia
11/2001–10/2003

Performed troubleshooting and executed programming modifications on an array of PLC types including: Allen-Bradley SLC 500 & PLC-5, Yaskawa CP3300, Automation Direct, and various Omron PLCs.

FEATURED PROJECTS

Save The Hippo

Site where users can register and post messages on their favorite animal, the hippo. They can like and unlike posts and follow other users. Built with Meteor.

Cool Beans Coffee

E-Commerce website built with node.js and Express. Mongoose and MongoDB are used for the database. Site allows users to register or login to the database and set up orders. Integrated with Stripe payment system.

Blackjack

Fully functional blackjack game coded entirely in JavaScript. The game allows a player to play against the computer who plays intelligently.
